No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Contents of Volume 15

Number 1, January 1986

Regular Articles

Hans Krügel and Gisela Fiedler. Copy Number Mutants of the Broad-Host-Range *Streptomyces* Plasmid pMG200 1

Walter Schurter and Bruce W. Holloway. Genetic Analysis of Promoters on the Insertion Sequence IS*21* of Plasmid R68.45 8

Peter L. Bergquist, Soheyla Saadi, and Werner K. Maas. Distribution of Basic Replicons Having Homology with RepFIA, RepFIB, and RepFIC among IncF Group Plasmids 19

Lung-Shen Lin and Richard J. Meyer. Directly Repeated, 20-bp Sequence of Plasmid R1162 DNA Is Required for Replication, Expression of Incompatibility, and Copy-Number Control 35

Wolfgang Schilf and Viji Krishnapillai. Genetic Analysis of Insertion Mutations of the Promiscuous IncP-1 Plasmid R18 Mapping near *oriT* Which Affect Its Host Range 48

Prefix Designations

Esther M. Lederberg. Plasmid Prefix Designations Registered by the Plasmid Reference Center 1977–1985 57

Number 2, March 1986

Regular Articles

Timothy McKenzie, Takayuki Hoshino, Teruo Tanaka, and Noboru Sueoka. The Nucleotide Sequence of pUB110: Some Salient Features in Relation to Replication and Its Regulation 93

Nevine El Solh, Nicole Moreau, and S. D. Ehrlich. Molecular Cloning and Analysis of *Staphylococcus aureus* Chromosomal Aminoglycoside Resistance Genes 104

A. Craig Chinault, Vicky A. Blakesley, Erich Roessler, Diana G. Willis, Clayton A. Smith, Richard G. Cook, and Raymond G. Fenwick, Jr. Characterization of Transferable Plasmids from *Shigella flexneri* 2a That Confer Resistance to Trimethoprim, Streptomycin, and Sulfonamides 119

Michael A. Cross, Simon R. Warne, and Christopher M. Thomas. Analysis of the Vegetative Replication Origin of Broad-Host-Range Plasmid RK2 by Transposon Mutagenesis 132

Robert E. Enns, Adella M. Garland, and Douglas W. Smith. M13-*oriC* Cloning Vehicles: Use for Amplification of High Copy Lethal (HCL) Genetic Elements 147

Short Communications

A. Wright, K. Maundrell, W-D. Heyer, D. Beach, and P. Nurse. Vectors for the Construction of Gene Banks and the Integration of Cloned Genes in *Schizosaccharomyces pombe* and *Saccharomyces cerevisiae* 156

AKINORI OHTA, TAKASHI SUDA, KAZUHIRO KIYONO, AND ISAO SHIBUYA. Overproduction of Proteins Encoded by λ Replicon-Integrated Plasmid: Effect of Partial Inactivation of *c*I Repressor 159

NUMBER 3, MAY 1986

REGULAR ARTICLES

ERIK RIISE AND SØREN MOLIN. Purification and Characterization of the CopB Replication Control Protein, and Precise Mapping of Its Target Site in the R1 Plasmid 163
GORDON S. A. B. STEWART, SHARON LUBINSKY-MINK, CLIVE G. JACKSON, ALIZA CASSEL, AND JONATHAN KUHN. pHG165: A pBR322 Copy Number Derivative of pUC8 for Cloning and Expression 172
GORDON S. A. B. STEWART, SHARON LUBINSKY-MINK, AND JONATHAN KUHN. pHG276: A Multiple Cloning Site pBR322 Copy Number Vector Expressing a Functional *lacα* Peptide from the Bacteriophage *Lambda* P_R Promoter 182
SERBAN IORDANESCU. Effect of the Deletion of a Fragment Dispensable for the Autonomous Maintenance of Plasmid pT181 on the Competition between Incompatible Plasmids 191
J. L. LARSON AND C. L. HERSHBERGER. The Minimal Replicon of a Streptomycete Plasmid Produces an Ultrahigh Level of Plasmid DNA 199
ALISTAIR J. LAX AND CAROL A. WALKER. Plasmids Related to RSF1010 from *Bordetella bronchiseptica* 210
NORIYUKI NAKANISHI, TADAHIRO OSHIDA, SHIGERU YANO, KATSUO TAKEDA, TOTARO YAMAGUCHI, AND YUKIO ITO. Construction and Characterization of New Cloning Vectors Derived from *Streptomyces griseobrunneus* Plasmid pBT1 and Containing Amikacin and Sulfomycin Resistance Genes 217
PETER J. CHRISTIE AND GARY M. DUNNY. Identification of Regions of the *Streptococcus faecalis* Plasmid pCF-10 That Encode Antibiotic Resistance and Pheromone Response Functions 230

SHORT COMMUNICATIONS

TOM EDLIND, RY YOUNG, RICHARD ELLER, JIM HERNANDEZ, AND GARRET IHLER. Plasmid Expression Vector Using the Lambda Late Promoter 242
CLAIRE ESTRAMAREIX, PASCAL RATET, FRANÇOISE BOULANGER, AND FRANÇOIS RICHAUD. Multiple Mutations in the Transferred Regions of the *Agrobacterium rhizogenes* Root-Inducing Plasmids 245
C. FALCONE, M. SALIOLA, X. J. CHEN, L. FRONTALI, AND H. FUKUHARA. Analysis of a 1.6-μm Circular Plasmid from the Yeast *Kluyveromyces drosophilarum:* Structure and Molecular Dimorphism 248
AUTHOR INDEX FOR VOLUME 15 253

The Subject Index for Volume 15 will appear in the November 1986 issue as part of a cumulative index for the year 1986.

Instructions to Authors

Plasmid has been developed in response to the emergence of extrachromosomal gene systems as a coherent and very active field of biology and of the consequent need for a specific medium of communication therein. The primary content of the Journal will thus be reports of original research into the biology of extrachromosomal gene systems, in prokaryotic and eukaryotic organisms, including their biological behavior, their molecular structure and genetic function, and their specific products.

Plasmid encourages the preparation of short, highly focused review articles summarizing recent progress in highly active areas of research involving extrachromosomal gene systems. Authors wishing to prepare such a review should submit a short proposal, including an expected date of submission, to the Editor-in-Chief.

Manuscripts should be submitted in triplicate to the Editor-in-Chief or any one of the Editors. (See inside front cover for addresses). Authors are required to submit three copies of each manuscript. In all cases, at least two copies of all halftone prints are required. For line drawings, originals or prints are required for the top copy and photocopies will suffice for the second and third.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Plasmid* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high-quality bond paper, using double or triple spacing throughout. Subdivision of articles into Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References is recommended. The manuscript must begin with an Abstract. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and planned to fit the proportions of the printed page (5½ × 8 inches; column width, 2½ inches). Lettering on drawings should be large enough to take a reduction of 50 to 60%.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. The photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. For best reproduction provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. Illustrations in color can be accepted only if the authors defray the cost.

With respect to halftone prints, authors are reminded that they are responsible for ensuring that the quality of the print is sufficient to ensure clear reproduction. This refers especially to photographs of gels and electron micrographs. In case of doubt, Academic Press will be happy to provide advice.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text. Footnotes to tables should be typed directly beneath the tables.

References. Names of authors should be mentioned in the text with the year of publication in parentheses. References should be listed alphabetically at the end of the paper as follows:

KONARSKA-KOZLOWSKA, M., AND IYER, V. N. (1983). Sequence homology between Inc N group plasmids. *Plasmid* **10,** 211–223.

TARDIF, G., AND GRANT, R. B. (1980). Characterization of the host range of the N-plasmids. *In* "Plasmids and Transposons" (C. Stuttard and K. R. Rozee, eds.), pp. 351–359. Academic Press, New York.

See, however, the instructions for Short Communications below. The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index,* 1980.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscripts in preparation," "unpublished observations," and "personal communications."

Abbreviations and symbols. The author is asked to follow the usage established by "A Proposal for a Uniform Nomenclature in Bacterial Genetics" (Demerec *et al.*, *Genetics* **54,** 61, 1966); and "Uniform Nomenclature for Bacterial Plasmids: A Proposal" (Novick *et al.*, *Bacteriol. Rev.* **40,** 168, 1975). Abbreviations for units should follow the Système Internationale.

Nomenclature of microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text, and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use any section headings except Acknowledgments and References. All Short Communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure). References should be given serial numbers in the text and listed consecutively at the end of the text (serial number, author, name of journal, volume, first and last page, and year of publication).

Plasmid publishes physical and genetic maps of important plasmids and related elements. Manuscripts should be in the form of a short communication and should include a brief description of the element, a paragraph mentioning any special methods used, and another outlining the mapping strategy. A detailed description of the experiments should be provided with the manuscript. This will be made available to reviewers and will be filed by the editor-in-chief for future reference by interested parties. Its existence will be noted in the manuscript.

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the proofs.
